GEPARD RABBIT FROM ŠTRBA

SLOVAK RABBITS BREEDS

It is very helpful that a part of breeds has its enthusiasts to the breed also outside Slovakia and for example the population of breeding Blue of Holic rabbits in Germany is estimated on 30 breeding females and 100 males.

- Slovak national breeds of rabbits belong to the cultural biological heritage, and our aim is to preserve and raise it for future generations of breeders.
- Some of breeds are present as very small populations consisting of approximately 20 breeding females and of 10 to 15 males.
- But without support and long-term state assistance, this effort is very difficult.

THANK YOU
